What is a SAFT lithium battery?

Saft lithium batteries have a small magnetic footprint and are resistant to passivation. The phenomenon causes a reduced initial voltage supply under load until the cell discharge approaches peak flow. This characteristic is undesirable in high-performance applications but is commonly the case with some types of cheaper substitute batteries.

Are D batteries rechargeable?

IMPORTANT NOTE: This D battery is 3.7V which is a higher voltage than common household D batteries. It is only to be in equipment designed for it and will damage equipment requiring regular voltage D batteries. It is **NOT RECHARGEABLE** and attempting to do so is extremely dangerous.
