What is a 48V lead acid battery?

The 48V lead-acid battery state of charge voltage ranges from 50.92 (100% capacity) to 45.44V (0% capacity). Lead acid battery is comprised of lead oxide (PbO₂) cathode and lead (Pb) anode. The medium of exchange is sulphuric acid. Most common example of lead-acid batteries are car batteries.

Can you swap lead-acid batteries with lithium-ion batteries?

Yes, you can swap lead-acid batteries with lithium-ion ones in many cases. But, you must check if the system fits the new battery's needs. This includes voltage, charging, and space. The right lithium battery, like LiFePO₄ (LFP) or Lithium Nickel Manganese Cobalt (Li-NMC), ensures top performance and life.

Can a lithium ion battery match a lead-acid battery?

When you switch from a lead-acid to a lithium-ion battery, knowing the voltage is key. Lithium-ion batteries, like LiFePO₄, have different voltages than lead-acid ones. For 12V systems, a 4S LiFePO₄ setup can match lead-acid voltages well. But for 24V or 48V systems, you have more options.

Who makes lead acid batteries?

CTT Technical Ltd are global experts in the manufacture of lead acid batteries. We have a range of products to assist you in setting up your operation and keeping it running like clockwork.

Are lithium-ion batteries more energy-efficient than lead-acid batteries?

Lithium-ion batteries are more energy-efficient. They use up to 30% less energy than lead-acid batteries. This can lead to big savings on energy costs. When looking at ROI, consider the benefits of lithium-ion batteries. They are lighter, which can increase payload capacity. This can also reduce fuel costs.
