

What is a home backup battery?

A home backup battery provides a safety net when you need to protect your family against a power loss. It delivers clean power, unlike a home standby generator that relies on fossil fuels. With battery backup solutions, you get energy security and peace of mind.

How does a home battery backup system work?

A home battery backup system consists of three main components: the battery bank lithium-ion or lead-acid the inverter that converts DC power to AC power and the control system that manages power flow. These components work together to store excess electricity and provide power when needed.

Should you invest in a home battery backup system?

Invest in a home battery backup system to ensure uninterrupted power during outages, with options from Tesla, LG, and Enphase offering savings of up to 90% on energy bills. Power outages can strike at any moment leaving your home vulnerable and disrupting your daily life.

Why do you need a battery backup system?

Power outages can strike at any moment leaving your home vulnerable and disrupting your daily life. Battery backup systems offer a reliable solution to keep your essential appliances running and your family comfortable during unexpected blackouts.

How does a solar backup battery system work?

A solar backup battery system works by storing surplus energy generated by solar panels during the daytime and utilising that stored energy to power critical home loads when the grid power goes out. EPS, or Emergency / Backup Power Supply, refers to a solar system's ability to automatically switch over to battery backup in case of a grid outage.

Why do you need a solar battery backup system?

A solar battery backup system brings peace of mind during power outages. It ensures your home stays powered when the grid goes down. However, additional external components and extra work are required to enable the backup EPS function to supply power to your critical circuits.

This refers to the amount of battery capacity you can use safely. For example, if a 12kWh battery has an 80% depth of discharge, this means you can safely use 9.6kWh. You should never use your battery beyond its depth of ...
