

How much do EV batteries cost in 2021?

As electric vehicle (EV) battery prices keep dropping, the global supply of EVs and demand for their batteries are ramping up. Since 2010, the average price of a lithium-ion (Li-ion) EV battery pack has fallen from \$1,200 per kilowatt-hour (kWh) to just \$132/kWh in 2021.

How much does a new battery cost for an EV?

Some EV owners are taken by surprise when they discover the cost of replacing their batteries. Depending on the brand and model of the vehicle, the cost of a new lithium-ion battery pack might be as high as \$25,000:

How much does a battery cost?

This specific composition is pivotal in establishing the battery's capacity, power, safety, lifespan, cost, and overall performance. Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh.

How much does a lithium ion EV battery cost?

Since 2010, the average price of a lithium-ion (Li-ion) EV battery pack has fallen from \$1,200 per kilowatt-hour (kWh) to just \$132/kWh in 2021. Inside each EV battery pack are multiple interconnected modules made up of tens to hundreds of rechargeable Li-ion cells.

What factors affect the price of an EV battery pack?

The price of an EV battery pack can be shaped by various factors such as raw material costs, production expenses, packaging complexities, and supply chain stability. One of the main factors is chemical composition. Graphite is the standard material used for the anodes in most lithium-ion batteries.

How much does a 100 kWh battery cost?

The price of these batteries is an entirely different story. A typical 100kWh pack will set the purchaser back somewhere around \$25k - 32k. End consumers pay prices, the OEM pays costs, and costs beyond just major raw materials. Should have explained the pros and cons of each battery type.
