

What is a battery planning guidance?

It provides an overview of battery types, planning regulations in the UK, and information on safety issues that should be considered during planning and risk assessments. It is intended to be concise and reflect current practice and knowledge in this fast-changing sector. The guidance is intended for: decisions. Are you an EI Member?

How to evaluate the safety of battery technologies?

The safety of battery technologies can be evaluated by first making an inventory of the chemicals used in the different parts of the battery. Safety information can then be gathered from the following sources by filling in the chemical name or preferably CAS number: 1.

What is a new battery regulation?

The new Regulation establishes a comprehensive framework covering all types of batteries and addressing their whole life cycle from production process to design requirements as well as second life, recycling and incorporating recycled content into new batteries. 2. What does the Commission aim to achieve with the current proposal for a regulation?

What is the new EU Battery regulation 2023/1542?

The new EU Battery Regulation 2023/1542 entered into force on 17 August 2023 and covers the whole lifecycle of batteries from production to reuse and recycling. While the Battery Regulation is already in force, further legal documents will be published in the coming years specifying certain aspects of the implementation (see timeline below).

What are the new regulations on battery storage in 2024?

The Commission proposes that existing restrictions on the use of hazardous substances in all battery types are maintained, in particular for mercury and cadmium. Furthermore, as of 1 July 2024, rechargeable industrial and electric vehicles batteries with internal storage placed on the Union market will have to have a carbon footprint declaration.
