

How many volts does a battery charge?

The charging voltage can be between 9 volts and 24 volts. The current drawn from the charging source is limited to about 1 amp, so the pack will charge faster at the higher input voltages. If you are also running a load then the input current raises to the power required by the charging plus the power required by the load.

How many volts can a battery pack charge?

The charger section of the battery pack has a DC/DC converter with a wide input range. This means that the pack can be charged from a wide variety of sources. The input voltage for charging can be as low as 5 volts and as high as 24 volts.

Can a 12V Charger overcharge a battery?

In fact any voltage between 12VDC and 24VDC can be used to charge it. The internal charger is a smart charger, it will not overcharge the battery. In fact when I am in China I leave the battery connected to the computer and run the "charger" into the battery.
