the separator for a lead-acid battery according to the invention is a porous membrane made mainly from a polyolefin resin, an inorganic powder and a mineral oil and containing a surface active agent as an auxiliary material, characterized in that the amount of any reducing substance liberated or eluted after 24 hours of electrolysis carried out at about 25°C with a direct current ...

Lead-acid batteries are rechargeable batteries with over 150 years of use. They remain widely used in various applications, such as powering vehicles, boats, and providing backup power for homes and businesses. Construction A lead-acid battery is made of lead plates, lead oxide, and an electrolyte solution of sulfuric acid and water. When a ...

In most cases, the battery is a lead-acid battery of the type found in passenger automobiles. For large vehicles and heavy equipment, the batteries may be far larger in size and number. For heavy-duty applications--such as those found on ships, aircraft, locomotives, and other industrial vehicles--the batteries are typically kept in a compartment or room.
