

Derivation of equivalent capacitance of series capacitors

What is the equivalent capacitance if two capacitors are connected in series?

Derive the formula for equivalent capacitance when the capacitors are connected in series. Explain series combination of Capacitors. Derive the formula for equivalent capacitance. When two identical capacitors are connected in series, the equivalent capacitance is $7.5\mu\text{F}$. What is the equivalent capacitance when they are connected in parallel?

What is the formula for equivalent capacitance in series?

In series, each capacitor has same charge flow from battery. The three capacitors C_1, C_2 and C_3 are in series. Now, charge on first capacitor is $Q_1 = C_1 V$, charge on second capacitor is $Q_2 = C_2 V$ and charge on third capacitor is $Q_3 = C_3 V$. $\frac{1}{C_{eq}} = \frac{1}{C_1} + \frac{1}{C_2} + \frac{1}{C_3}$, this is the formula for equivalent capacitance in series.

What is a series combination of capacitors?

Explain series combination of Capacitors. Derive the formula for equivalent capacitance. When one terminal of a capacitor is connected to the terminal of another capacitors, called series combination of capacitors. In series, each capacitor has same charge flow from battery. The three capacitors C_1, C_2 and C_3 are in series.

What if two capacitors are connected in a series?

If two capacitors of $10\ \mu\text{F}$ and $5\ \mu\text{F}$ are connected in the series, then the value of total capacitance will be less than $5\ \mu\text{F}$. The connection circuit is shown in the following figure. To get an idea about the equivalent capacitance, let us now derive the expression of the equivalent capacitance of two capacitors.

What is the mathematical expression of equivalent capacitance of capacitors in series?

From these two expressions, it is clear that the mathematical expression of equivalent capacitance of capacitors in series is in the same form as the expression of resistance in parallel. The total capacitance (C_T) of the series connected capacitors is always less than the value of the smallest capacitor in the series connection.
