Lithium-ion batteries are lighter than lead-acid batteries. For example, a lithium-ion battery can weigh up to 70% less than an equivalent lead-acid battery for the same energy capacity. This weight reduction improves the efficiency and usability of electric vehicles, making lithium-ion the favored option in modern applications.

However, lead-acid batteries are more affordable at around ₹2,000 on average, making them a viable option for households with a stricter budget. Compared to lithium-ion batteries, lead-acid batteries have a lower energy density, a shorter lifespan, and are much heavier and larger.
