Energy Storage Technology and Materials Textbook

The significance of high-entropy effects soon extended to ceramics. In 2015, Rost et al. [21], introduced a new family of ceramic materials called "entropy-stabilized oxides," later known as "high-entropy oxides (HEOs)".They demonstrated a stable five-component oxide formulation (equimolar: MgO, CoO, NiO, CuO, and ZnO) with a single-phase crystal structure.
