Does energy storage system provide frequency response?

Providing Frequency Response(FR) using energy storage system (ESS) has been adopted in power systems worldwide to reduce the maximum frequency deviation. This paper presents a new equivalent system frequency response model with ESS.

What is energy storage system (ESS)?

Energy Storage System (ESS) has been widely used to provide FR in many countries due to its flexibility and high response speed , , . Australian Energy Market Operator (AEMO) has proposed Contingency Frequency Control Ancillary Service (FCAS) and Regulation FCAS .

What is the capacity of ESS?

According to (11),the capacity of ESS is 0.05p.u.using the proposed GEM,larger than the required capacity of 0.017p.u. using the ? Method. The simulation results using the proposed method and ? Method are shown in Fig. 19. Fig. 19. Comparison with different methods.

How do you calculate the capacity of ESS?

The capacity of ESS is obtained by calculating the difference between ?target and ?total. (15) where the power rating of SGs after disturbance is 3028.91MVA,shown in Table 3. Table 3 lists the active power output and reactive power output of SGs at ? ftarget. Table 3. Active power and reactive power output of SGs.
