What is solar power storage?

Solar power storage systems, often referred to as solar battery storage, are designed to bridge the gap between energy generation and consumption. They store excess energy produced during the day when the sun is at its zenith and electricity generation is at its peak.

Which energy suppliers sell storage systems?

British Gas, Good Energy and Octopus Energy also sell storage systems as part of their solar panel packages. Find out about energy suppliers' solar panel packages and how much solar panels cost. The batteries below range from the size of a small computer to the size of a washing machine.

How does solar power storage work?

Many solar power storage systems come equipped with smart technology that optimizes energy consumption based on real-time data, ensuring that energy is used efficiently. Solar panels, comprised of photovoltaic cells, capture sunlight and convert it into direct current (DC) electricity.

Can solar energy provide a home with all the power?

In theory, solar energy should be able to provide your home with all the power it needs for the entire year, however, solar has a few limitations you should be aware of. Firstly, the solar panels should have maximum exposure to the sun year round, otherwise they'll struggle to generate adequate amounts of energy.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.

How can solar energy save you money?

Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills. If your home is off-grid, it can help to reduce your use of fossil fuel backup generators.
