How do batteries convert chemical energy into electrical energy?

Batteries are devices that store chemical energy and convert it into electrical energy. The process of converting chemical energy into electrical energy is called electrolysis. During electrolysis, electrons are transferred from one electrode to another through an electrolyte.

What is a battery & how does it work?

"A battery is a device that is able to store electrical energy in the form of chemical energy, and convert that energy into electricity," says Antoine Allanore, a postdoctoral associate at MIT's Department of Materials Science and Engineering.

How does a battery produce electricity?

"The ions transport current through the electrolyte while the electrons flow in the external circuit, and that's what generates an electric current." If the battery is disposable, it will produce electricity until it runs out of reactants (same chemical potential on both electrodes).

How do batteries store energy?

Batteries are used to store chemical energy. Placing a battery in a circuit allows this chemical energy to generate electricity which can power devices like mobile phones, TV remotes and even cars. Generally, batteries only store small amounts of energy. More and more mobile devices like tablets, phones and laptops use rechargeable batteries.

What are the components of a battery?

There are three main components of a battery: two terminals made of different chemicals (typically metals), the anode and the cathode; and the electrolyte, which separates these terminals. The electrolyte is a chemical medium that allows the flow of electrical charge between the cathode and anode.

What makes electricity from a chemical reaction?

A device, made up of lots of cells, that makes electricity from a chemical reaction. - The single unit of a battery. It is made of two different metals separated by a chemical. - The chemical that connects the electrodes in a cell or battery. Electricity can flow through electrolyte, just like it flows through wires or metal.
