

How to connect the battery line to the stadium power light

How many volts is a stadium light battery?

The battery used with the Stadium Light is 12 volts. Never attempt to alter this lighting system. Never use the battery with any other lighting system. Never disassemble the lamp body, ballast and battery. The battery has unique characteristics. The light output will remain high until the batteries run out, and will drop suddenly.

How do I get to the stadium of light?

Vehicles travelling from the south are advised to take the A1018 and A690 exits from the A19 and drop people off in the city centre or at Dame Dorothy Street, the main drop-off and pick-up point, with the Stadium of Light a short walk away.

Can a stadium light be submerged under water?

Although the lamp body and the battery are water-resistant (under normal weather conditions of rain, etc.), never intentionally submerge them under water. The battery used with the Stadium Light is 12 volts. Never attempt to alter this lighting system.

How to charge a bottle battery?

Connect the jack of the bottle battery's cord and the plug of the ballast's cord. Wind the cord round the frame so that it will not hinder riding. Note: Securely connect the jack to the plug. The continuous run-time is 3 hours from the fully-charged condition.

The 5V power supply was too large. When I hooked up a 3V power supply, the LED string functioned properly with the correct amount of light output/brightness. I realized that I didn't have to worry about the current rating ...
