

# How to disassemble a sealed lithium battery pack

How do you disassemble a lithium-ion battery pack?

When breaking down a lithium-ion battery pack, having the right tools for the job is critical. The tools you use to disassemble a lithium-ion battery pack can be the difference between salvaging a bunch of great cells and starting a fire. 5 pack of flush cut pliers. Perfect for removing the nickel strip that is attached to cells when salvaging.

Can you take apart a lithium-ion battery pack?

Taking apart a lithium-ion battery pack may appear challenging at first, but with a solid approach and some patience, anyone can do it. It's super important to understand the connections between battery cells and to recognize the potential risks, like shoulder shorts.

How do I dismantle a Li-ion battery?

The first step to take before dismantling a Li-ion battery is to identify its type and the amount of charge remaining in it. This information is critical because different types of batteries require different handling procedures. Additionally, the risks associated with dismantling the battery increase with the charge level.

How to disassemble a battery?

When it comes to disassembling a battery, the first important step is removing the battery cover or casing. This outer layer provides protection to the internal components of the battery and prevents any damage from external factors. By following a few simple steps, you can safely remove the cover or casing without causing harm.

What does it mean if a lithium ion battery pack is split?

It generally means that the other cell groups are just fine. Lithium-ion battery packs are spot welded together. So it's no small feat to separate the cells. In fact, breaking down a lithium-ion battery pack is a rather involved process that takes care and patience. You have to be extremely careful when breaking down a lithium-ion battery pack.

What should I bring to a battery disassembly?

Before you start the process, gather the following items: 1. Safety glasses: Protect your eyes from any potential sparks or debris that may fly off during disassembly. 2. Gloves: Wear gloves to safeguard your hands from accidental cuts or exposure to harmful chemicals present in some batteries.
