How do you install a 9v battery?

Hold the battery at a 30° angle and slide the connector side in first. Once you've lined up the snaps, tilt the 9V battery slightly. Push the top of the battery in until the snaps are touching, then press down on the battery so that it snaps into place. These types of batteries can be a little hard to install sometimes.

Can a battery be replaced with a power supply?

Say half an hour, then 24 V 24+A supply. Replacing a battery from a battery-operated equipment with a power supply can be tricky. Especially when the equipment uses an electric motor. The problem is that an electric motor can draw very large startup current - it can be as 10-20 times the nominal for a couple of seconds.

How do you install a battery?

Insert the battery with the positive side facing up. Most devices that use coin or button batteries install them with the positive side facing up, unless they state otherwise. If you don't see any markings on your device, it's generally safe to assume that the positive side of the battery goes in face-up.

What type of battery should I use?

An alkaline battery (such as Duracell or Ever Ready Gold Seal) would be much better in this position since the voltage does not drop off as the battery ages to the same extent as normal zinc-carbon cells. I feel that the best approach is some sort of mains power supply.

What should I do if my battery portable stops working?

If your battery portable quits working, try replacing the A battery before the B battery. Many battery-powered tube radios require only 1.5 volts for the A supply, which you can provide with ordinary 1.5-volt "D" cells (flashlight batteries). If more than 1.5 volts are needed, connect additional batteries in series.

How much does a battery radio battery supply cost?
