How do I install a battery module?

Install battery modules. Remove the front cover of the battery module, install the battery baffle plate, and tighten the two screws. Check the insulation performance of the battery module.

How do I move a battery module?

At least three persons are required to move a battery module. Tighten the screws on copper bars or cables to the torque specified in this document. Periodically confirm whether the screws are tightened, check for rust, corrosion, or other foreign objects, and clean them up if any.

How do you transport a battery module?

Wear personal protective equipment and use dedicated insulated tools to avoid electric shocks or short circuits. Assign at least three persons or use a lifting trolley to move a battery module. When using a lifting trolley, adjust the trolley to facilitate transportation and installation.

How do you install a copper bar on a battery?

Install copper bars between battery modules. Install the copper bar end with a round hole at the battery module on the upper layer, and close the terminal protective cover. Install the copper bar end with a slotted hole at the battery module on the lower layer, and close the terminal protective cover. Repeat these two steps.

How do I connect a half-capacity battery module?

In the half-capacity cabinet scenario, connect the cable reserved on the rightmost side of the cabinet when you install a communications cable at the bottom layer. To prevent the communications cable from being damaged, place the cable in the buckle when connecting the cable, and then close the front cover of the battery module.

How to install a filler panel on a battery module?

Install filler panels at the empty positions for battery modules. Install a filler panel at the last but one layer of the right column only after installing battery communications cables. Open the front cover of a battery module, install the baffle plate, and tighten the two screws. Check the insulation performance of battery modules.
