Placing solar panels on a sloped roof is entirely possible and offers several advantages, including increased sun exposure, improved self-cleaning, and aesthetic appeal. ...

On flat or lightly sloping roof areas, solar panels may be rack-mounted (installed on tilt-frames) to face them towards the sun. This can mean each panel generates more electricity, but there will be space between each row of panels (so the rows don't shade each other) which may reduce the number of panels that fit on the roof.
