An Ring Main Unit is a factory-assembled, metal-enclosed switchgear device at load connection points for a ring-type distribution network. This shall enclose the main components: two switches connecting the load to the main conductors and a fusible switch or circuit breaker arranging the distribution of medium voltage to low voltage power.

Our range of Ring Main Units (RMUs) are all suitable for both indoor and outdoor locations and are designed to operate in the most extreme environmental conditions. All of our air, oil and gas insulated ring main units are the result of ...

slightly off topic but When doing EICR's on TN installations, have found, that existing "Grid Tied" Solar PV Inverters of the "non-isolated, transformerless" type (with DC and AC isolators for maintenance, internal DC ground fault monitoring + DSP, internal AC leakage current detection monitoring + DSP), installed with DC cabling to inverter in surface conduit and T& E, AC cable, ...
