

# How to read the model number on the battery pack number label

How do I know if my battery has a model number?

You only need to provide the first six digits. Most of our batteries have the model number on the warning label attached to the plastic. It is made up of letters and numbers. You should be able to see it if you place the battery facing up. The date code is usually printed directly on the plastic of the battery, near the charging cells.

What is a battery pack serial number?

The serial number is a unique identifier for a Lithium-ion Battery Pack. There is only one battery pack with any assigned serial number. The Flux Power product support team can use the serial number to determine information about the battery pack that the operator is using.

How do I know if my battery has a date code?

The date code can be found at the bottom, and it will be easy to identify since it is engraved on the housing and has a date format. You only need to provide the first six digits. Most of our batteries have the model number on the warning label attached to the plastic. It is made up of letters and numbers.

Where can I find the model number on my Charger?

The model number on our chargers is usually located on the side of the charging station, printed on a label attached to the plastic. The date code can be found at the bottom, and it will be easy to identify since it is engraved on the housing and has a date format. You only need to provide the first six digits.

What is the difference between part number and serial number?

The part number is unique to each specific product design and defines the specific make-up of this particular battery pack. All battery packs having the same part number will be of identical construction. The serial number is a unique identifier, meaning there is only one battery pack with any assigned serial number.

What does a battery code represent?

The battery code represents the Year, Month, and Day a lithium-ion battery was manufactured. This is the normal electric voltage that we would expect to flow through a circuit.
