

How to set the DC load of solar photovoltaic panels

How do I set up a solar panel?

Note: When setting up your system, the solar panels should be out of the sun or covered for safety reasons.

Step 1: Hook up the battery to the charge controller. Connect the battery terminal wires to the charge controller FIRST, then connect the solar panel (s) to the charge controller.

How should a solar charge controller load output terminal be used?

At Sunstore we are often asked about how the solar charge controller load output terminal should be used. The load output on the charge controllers is ideal for putting small lighting circuits on in sheds, garages and outbuildings.

How do I connect a solar panel to a charge controller?

We will directly connect them to the charge controller, battery and DC loads. The following solar panel wiring diagram shows that a 12V, 120W PV panel is connected to the solar charge controller (Panel Negative terminal of panel to the negative terminal of MPPT charge controller and vice versa for positive terminal).

How do you use solar power if a battery is full?

Attaching a dump load to your solar system is a good way of using excess solar power when the battery is full. Instead of 'wasting' the energy from the solar panels you can add a water heater. This will divert the energy that cannot go into the battery anymore to hot water. There are three main ways we can divert the load to a heating element.

What is a small scale DC Solar power system?

This small scale DC solar power system needs three basic components of solar panel installation system i.e. a 12V, 120W Panel, 12V 100Ah battery, a 12VDC solar charge controller and DC load (like fans and light etc). As we have only single units of solar panel and battery etc.

Does a solar panel charge a battery?

The solar panel will also charge the battery but the charging time of the battery depends on the solar panel wattage, sunshine and ON/OFF condition of direct load. Related Solar Panel Wiring & Installation Diagrams: Wiring PV Panel to Charge Controller, 12V Battery & 12VDC Load.
