

How do you store rechargeable batteries?

Place your batteries in a vapor-tight container, then keep them at room temperature away from direct sunlight. To avoid losing charge and causing a fire risk, don't store coins or other metal objects with your batteries. For tips on how to store rechargeable batteries, keep reading!

How do you store a loose battery?

The best option for loose batteries is to store them in a way that allows them to lay side-by-side. Batteries are a choking hazard, especially coin cells and other small batteries. They should always be stored in a place that is out of the reach of toddlers and small children.

How do you store a lithium ion battery?

For lithium-ion batteries, it's generally recommended to store them at a moderate charge level, around 40% to 60%. Overcharging or over-discharging can damage lithium-ion batteries. Use a Storage Container: Store batteries in a dry, airtight container to protect them from moisture and dust.

How do you store a battery if it's flooded?

Remove batteries from infrequently used electronics between uses. When batteries are left in electronic devices, they discharge much faster than if left in storage by themselves. Storing wet (flooded) lead-acid batteries long-term is not recommended. These batteries require regular maintenance to top up water levels and prevent corrosion.

Where should batteries be stored?

The storage facility (e.g. a flammable storage cabinet) should be located away from heat and ignition sources and should offer: Temperature control: Batteries can be used at temperatures between -20C to 60C, but it's important to avoid reaching temperatures at the end of those ranges.

Why should you store batteries in your home?

Batteries come in many different shapes, sizes, and applications, and it can be very helpful to have several different kinds stored in your home for later use. Proper storage extends the life of the batteries and prevents them from becoming a safety hazard, and allows you to easily find them when you need them.
