

How to test the withstand voltage of single-phase capacitors

How to test a capacitor?

Thermal Stability Test. Radio Influence Voltage (RIV) Test. Voltage Decay Test. Short Circuit Discharge Test. This test ensures the withstand capability of insulation used in capacitor unit. Insulation provided on capacitor unit should be capable of withstanding high voltage ensures during transient over voltage condition.

How long can a capacitor withstand a DC test voltage?

A capacitor shall withstand a DC Test voltage applied for 10 seconds between the primary terminals. Where U_{test} = applied test voltage. U_n = capacitor rated voltage. The capacitor shall also withstand a 1-minute power frequency withstand test of a test voltage applied between the capacitor terminals and earth.

What types of tests are performed on a capacitor bank?

The type tests performed on the capacitor bank are: High Voltage Impulse Withstand Test. Bushing Test. Thermal Stability Test. Radio Influence Voltage (RIV) test. Voltage Decay Tests. Short Circuit Discharge Test. 1). High Voltage Impulse Withstand Test

How do you test a capacitor rated over 600 volts (RMS)?

Here, the capacitor unit is replaced with direct voltage equal to its peak rated alternating voltage. After charging, discharge the unit and monitor voltage decay. In the voltage decay test, a capacitor unit rated over 600 V (RMS) passes if the voltage drops below 50 V in 5 min. Capacitors under 600 V (RMS) should degrade within 1 min.

How much voltage should be maintained during a capacitor test?

The voltage once calculated or estimated and applied, it must be maintained within $\pm 2\%$ throughout 24 hours of the test period. This test is done at rated frequency and 115 % of rated rms voltage of capacitor. This test is only performed on the unit having more than one bushing.

Can a 12 kV capacitor withstand a voltage test?

The capacitor shall also withstand a 1 minute power frequency withstand test of a test voltage applied between the capacitor terminals and earth. For 12 kV rated capacitors, the test voltage is 75% of 28 kV. Refer to IEC 60871 or AS 2897 for other ratings. The requirements of the test are satisfied if no disruptive discharge occurs.
