

Which series of multilayer ceramic capacitors are available in kingtronics?

Multilayer ceramic capacitors are available in two series in Kingtronics: AKT Series Axial Lead, Axial MLCC Capacitors (Multilayer Ceramic Capacitors), MKT Series Radial MLCC Capacitors (Multilayer Ceramic Capacitors). Our leaded multilayer ceramic capacitors have excellent support, prices are unbeatable and lead time normally is very fast.

What type of capacitors does kingtronics use?

Kingtronics focus on multilayer type. MLCC Capacitors (Multilayer Ceramic Capacitors) are constructed using an alternating stack of conductors and insulators, connected on both sides by a common termination. The standard termination material for ceramic capacitors is nickel barrier with a 100% tin coating to comply with the latest RoHS standards.

Does kingtronics offer disc ceramic capacitors?

While, Kingtronics don't offer disc ceramic capacitors. Kingtronics focus on multilayer type. MLCC Capacitors (Multilayer Ceramic Capacitors) are constructed using an alternating stack of conductors and insulators, connected on both sides by a common termination.

What size ceramic capacitors are available?

Surface mount ceramic capacitors are available in sizes ranging from 0402 to 2225. Kingtronics also offers larger-sized ceramic capacitors on a custom basis. Ceramic capacitors: NPO (COG) is a high-Q, low-K, temperature-compensating type of dielectric with stable electrical properties under varying voltage, temperature, frequency, and time.

What is a ceramic capacitor?

Ceramic capacitors: NPO (COG) is a high-Q, low-K, temperature-compensating type of dielectric with stable electrical properties under varying voltage, temperature, frequency, and time. It is suitable for circuits that require low loss, as well as timing and tuning applications.

Which material is used in the manufacture of ceramic capacitors?

Ceramic is the dielectric material used in the manufacture of ceramic capacitors. Dielectrics are the insulating material between the plates of capacitors. This material is chosen for its ability to permit electrostatic attraction and repulsion to take place across it.
