

How do you recondition a lead acid battery?

Steps to Recondition a Lead-Acid Battery
Safety First: Wear safety goggles and gloves to protect yourself from the corrosive acid.
Remove the Battery: Take the battery out of the vehicle or equipment.
Open the Cells: Remove the caps from the battery cells. Some batteries have screw-in caps, while others have rubber plugs.

Can lead acid batteries be reconditioned?

Lead acid batteries can sometimes sustain damage that cannot be repaired through reconditioning. A common issue is sulfation, where lead sulfate crystals accumulate on the battery plates. Severe sulfation may reduce the battery's capacity beyond recovery, making replacement necessary.

How do you charge a lead acid battery?

Remove the battery from the vehicle to charge it. Charging a fully discharged lead acid battery off of a car alternator can result in an overcharge and may damage the battery. Use a crescent wrench to loosen the battery cables. Always wear safety goggles and protective gloves when working with lead acid batteries, even the sealed type.

Can a lead acid battery be drained?

Low maintenance or "sealed" lead acid batteries are widely used in cars and other vehicles like ATVs and golf carts. However, these batteries can be completely drained on occasion and must be recharged. The process is similar to that used for the older types of lead acid batteries (those that have removable caps on top for each battery cell).

What is a lead acid battery?

Lead-acid batteries are wet cell batteries. Each cell contains two slightly different lead plates, and the plates sit in electrolyte fluid, which contains sulfuric acid. If the electrolyte level gets too low, the lead plates are exposed and sulfation -- the deposit of a hard lead-sulfate compound on the lead electrodes of the battery -- occurs.

Can You charge a lead acid battery off a car alternator?

Charging a fully discharged lead acid battery off of a car alternator can result in an overcharge and may damage the battery. Use a crescent wrench to loosen the battery cables. Always wear safety goggles and protective gloves when working with lead acid batteries, even the sealed type. The sulfuric acid in the battery is extremely corrosive.
