

A solar power plant provides green electricity to the public via a power grid. As governments worldwide have pledged to reduce carbon emissions and achieve carbon neutrality, large-scale grid-connected solar power plants are booming. Developing such a plant requires significant investment, a large proportion of which covers construction costs.

In Ireland, 349MW of utility-scale solar projects (>5 MW) are connected to the transmission system, including some very large projects. For example, the Ballymacarney Solar Project at 200MWp will connect to EirGrid's 110kV system. Transmission grid-connected solar projects mark "new era"

The solar developers association voiced this as a major concern in the deployment of large scale commercial solar projects, and proposed the approvals to be limited up to solar installations of one megawatt. The aim of this research is to understand the role of solar power generation in the UK Energy and Power

This paper presents a road map for the design and development of sustainable hybrid High Brightness Light Emitting Diode (HB LED) illumination systems with maximum power point tracking (MPPT).
