

Solar energy is a very important energy source because of its advantages. There are many remote areas in the world where electricity is not available, but solar irradiation is plentiful, thus the utilization of solar energy to produce electricity in these areas is quite possible [42]. Solar thermal electricity power system is a device which utilize the solar radiation for the generation ...

nology. The tower, trough, linear Fresnel, and dish-type, four solar thermal power stations were compared. Finally the feasibility of constructing a large-scale solar thermal power station in the northwest region was explored, and it was concluded that the tower solar thermal power station

Subsequently, the accumulated thermal energy is employed during the evening hours after sunset or during instances of substantial cloud cover, wherein solar power proves inadequate for electricity generation [15]. There are significant large cost of thermal storage in molten salt, which influence the economics of solar

power plants [4].

As a thermal energy generating power station, CSP has more in common with thermal power stations such as coal, gas, or geothermal. A CSP plant can incorporate thermal energy ...
