Will lithium-ion battery prices decline in 2025?

BNEF forecasts pack prices to decline by USD 3 per kWh in 2025. (USD 1 = EUR 0.950) The global average price of lithium-ion battery packs has fallen by 20% year-on-year to USD 115 (EUR 109) per kWh in 2024, marking the steepest decline since 2017, according to BloombergNEF's annual battery price survey, unveiled on Tuesday.

Which countries have the lowest battery prices?

Regionally, China had the lowest average battery pack prices at USD 94 per kWh, while costs in the US and Europe were 31% and 48% higher, respectively. Download the Renewable Energy in Bulgaria analysis [here](#).

Why are battery prices falling in China in 2024?

In 2024 alone, China is expected to produce enough cells to meet 92% of global demand, creating downward pressure on prices. Cheaper Materials: A decline in the costs of metals and components, coupled with the adoption of more affordable lithium iron phosphate (LFP) batteries, has further driven the price drop.

Will battery EV prices fall below \$100/kWh by 2026?

The report forecasts that battery pack prices will fall below the \$100/kWh benchmark by 2026--considered a critical tipping point for EV affordability. In China, where battery EV prices have already undercut their gasoline-powered counterparts, this milestone has been achieved ahead of schedule.

What challenges are looming over the EV battery market?

Despite the price drop, several challenges continue to loom over the EV battery market: Geopolitical Tensions: Trade policies, such as potential tariffs on Chinese imports proposed by U.S. President-elect Donald Trump, could significantly alter global battery pricing and supply chains.
