Monocrystalline solar panels are the most expensive, and their cost per kW is somewhere around $\$1,000$ - $\$1,500$ whereas polycrystalline solar panels cost about $\$900$ per kW. When it comes to thin-film solar panels, these cost between $\$400$ and $\$800$ per kW.

However, this may vary based on the specific model being compared. Monocrystalline solar cells have achieved energy conversion rates of 24%, much favorable compared to polycrystalline at 18% or thin-film at 13%. This means you can get more power per square foot with mono-crystalline. However they are often more expensive solar panels.
