

Perovskite mesoporous layer for solar cells

Why do perovskite solar cells have a mesoporous structured electron transport layer?

Provided by the Springer Nature SharedIt content-sharing initiative Mesoporous structured electron transport layers (ETLs) in perovskite solar cells (PSCs) have an increased surface contact with the perovskite layer, enabling effective charge separation and extraction, and high-efficiency devices.

How do perovskite solar cells work?

The carrier transport materials The perovskite solar cell devices are made of an active layer stacked between ultrathin carrier transport materials, such as a hole transport layer (HTL) and an electron transport layer (ETL). The band alignment depends on their energy level, electron affinity, and ionization potential.

What is a mesoporous perovskite solar cell (MPSC)?

Among different device architectures and technical routes, mesoporous perovskite solar cells (MPSCs) based on TiO_2 / ZrO_2 / carbon scaffold and screen-printing fabrication process have shown unique advantages for mass production and commercialization due to the low material cost and scalable fabrication process.

What are the different types of perovskite solar cells?

Different types of perovskite solar cell Mesoporous perovskite solar cell (n-i-p), planar perovskite solar cell (n-i-p), and planar perovskite solar cell (p-i-n) are three recent developments in common PSC structures. Light can pass through the transparent conducting layer that is located in front of the ETL in the n-i-p configuration.

Are printable mesoscopic triple-layer perovskite solar cells effective?

Outlooks for further improving the performance of printable mesoscopic triple-layer perovskite solar cells are provided. In recent years, there has been notable progress in the development of perovskite solar cells (PSCs), marked by significant advancements in efficiency, stability, and scalability.

What is a low temperature processed perovskite solar cell?

A low temperature processed perovskite solar cell was developed. The stack included an ALD TiO_2 compact layer and a UV-treated mesoporous TiO_2 scaffold. The cell exhibited a PCE of 16% at 1 sun and a PCE of 25% under indoor illumination. The role of the low temperature ALD compact layer was highlighted, especially under indoor illumination.

S6a,b shows the PL spectra from the perovskite layer located on the mesoporous substrates with different concentration of Si NPs. ... Mesoporous perovskite solar cell cross-section was investigated with low accelerating voltage of 1.5 kV to prevent charge effects from nonconductive substrate. In-Lens detector was chosen to get better topography ...

This work introduces a novel method of low-temperature (70 $^{\circ}\text{C}$) ambient-air plasma treatment for the

rapid fabrication of mesoporous titania/polysiloxane thin films in ...

The performance was similar to that of the current mesoporous perovskite solar cell. ²³ It could be seen from Fig. 15(a) that the performance of the planar structure was still slightly higher than that of the three-layer mesoporous solar cell, with a current density of 27.5 mA/cm² and a large open circuit voltage of 1.33 V, which was close to the current certified ...

We found that when the mixed-halide perovskite (CH₃NH₃PbI_{3-x}Cl_x) is crystallized in the presence of a mesoporous layer, the heat transfer flux is affected and therefore the perovskite formation shifts to higher ...

In this study, a layer of TiO₂, which is the most popular metal oxides used for perovskite solar cells applications, was deposited as the electron transport layer. To enhance the perovskite ...

Improved electron injection through passivation of defects at the titanium oxide interface has boosted the efficiency of mesoporous perovskite solar cells. In these ...

The rheological impact of the mesoporous-TiO₂ (m-TiO₂) layer was investigated, which impacted perovskite solar cell (PSC) performance. This also implies the significance of morphological variations according to the pastes' viscosity and corresponding thickness that cause a slight influence on their bandgap and hence device photovoltaic ...

The perovskite solar cells structure are composed of glass, FTL, c-TiO₂, mp-TiO₂, perovskite, Spiro-OMeTAD, and/or Au. The effect of various counter anions ...

The mesoporous perovskite solar cells with the compact TiO₂ layer exhibited a dense and pinhole-free highly crystalline perovskite film with improved optical and electrical properties. On the other hand, the mesoporous perovskite solar cells without the compact TiO₂ layer suffered from severe recombination problems at the perovskite/FTO interface.

In this work, SiO₂ nanoparticles (NPs) were integrated into the mesoporous TiO₂ layer of a perovskite solar cell to investigate their effect on cell performance. Different concentrations of SiO₂/ethanol have been combined in TiO₂/ethanol to prepare pastes for the fabrication of the mesoporous layer with which perovskite solar cells have been fabricated. Addition of SiO₂ ...

Due to the unique advantages of perovskite solar cells (PSCs), this new class of PV technology has received much attention from both, scientific and industrial communities, which made this type of ...

In photovoltaics, perovskite solar cells (PSCs) have shown efficiency improvement with scalable and low-cost fabrication. This work investigates the additions of surfactants to PSCs during and after cell ...

Perovskite mesoporous layer for solar cells

Ion accumulation in perovskite solar cells can be highly suppressed by a mesoporous TiO₂ layer. This is evidenced by the decrease of the ion-related electrostatic potential with increasing the ...

The study carried out here is the ambient preparation of CH₃NH₃PbI₃ (methylammonium lead iodide, MAPI)-based perovskite solar cells (PSCs) without a hole transport layer (HTL). The TiO₂ electron transport layer (ETL) is deposited using three different methods, namely, chemical deposition, RF sputtering and e-beam evaporation, and the ...

Amita Ummadisingu, a lecturer at University College London, discusses her career path and thoughts on the long-term use of perovskite materials in solar cells.

5.2 Single Perovskite Junction Solar Cell Architectures. In the simplest solar cell configuration, analogous to what is implemented for 3D perovskites, the layered material acts as ...
