That "feature" requires a power source to be plugged in, so if it's on an AC adapter or dock then battery drain isn't a concern anyway. At which point you could just leave it in sleep mode. Reply reply More replies More replies More replies More replies

I was curious about the low power mode which comes with macOS Monterey so here's the geekbench results from my M1 MacBook Air 16GB 7Core GPU 256GB, for anyone interested. I didn't have time to measure how many hours of usage ...

I've had low powered mode turned on for about two weeks. The specs I have are 14" M1 Pro 10/16/16, with 16GB Ram and 1 TB storage.
