

New Delhi - Gautam Solar, manufacturer of Technically Advanced Modules™, announces the filing of a Patent for its latest Artificial Intelligence (AI)-based system to detect defects in solar panels. This innovative solution integrates advanced imaging and AI technologies to enhance the efficiency and precision of defect detection in photovoltaic cells,...

Methods and systems are provided for detecting a defect in a solar panel. The method includes initially imaging, via an infrared camera, a group of solar panels. Then, identifying, via a computer system configured for solar panel defect detection, the individual solar panels in the group of solar panels. Finally, identifying, via evaluation of an infrared image obtained by the infrared camera ...

1971 and provides a hierarchical system for the classification of patents. If more than one IPC code is assigned to a patent, it ... Radical innovation detection in the solar energy domain based ...

Enables 24/7 communication with the Cloud Platform for continuous wildfire detection and forest health monitoring. Connectivity via LTE radio (LTE-M/NB-IoT with 2G fallback), ...

1990-01-17 Priority to US07/466,226 priority Critical patent/US4982176A/en ... Similarly, the price of solar cells increases with size. Hence, the solar cells should be sized in conjunction with the battery size to provide a desired charge to the battery. ... Solar battery-driven object detection system US20140292527A1 (en) \* 2013-03-27: 2014 ...

Gautam Solar Files Patent for AI-Based System to Detect Defects in Solar Panels. Gautam Solar has filed a patent for an AI-powered defect detection system for solar panels, leveraging advanced imaging and machine-learning algorithms to enhance quality control and production efficiency in solar manufacturing. December 09, 2024. By Mrinmoy Dey

Gautam Solar on Monday said it has sought patent for its artificial intelligence (AI)-based system to detect defects in solar panels. This innovative solution integrates advanced imaging and AI technologies to ...

Gautam Solar, a manufacturer of Technically Advanced Modules(TM), has filed a patent for its latest AI-based system to detect defects in solar panels. This innovation integrates advanced imaging and AI technologies to enhance the efficiency and precision of defect detection in photovoltaic cells, setting a new benchmark for the solar industry.

Solar Dust Detection System Abstract: In this paper, the impact of soiling loss on the electrical performance of a solar panel and the estimation of the optimum cleaning time are studied. The study focuses on the improvement of energy output on cleaning the panel and the cost incurred in doing so, thereby not affecting

the net Rs/unit value.

USPTO patent applications submitted by and patents granted to First Solar, Inc. Log In Sign Up. Find a Lawyer; Ask a Lawyer; Research the Law; Law Schools; Laws & Regs; Newsletters; Marketing Solutions. Justia Connect; ... IN SITU SUBSTRATE DETECTION FOR A PROCESSING SYSTEM USING INFRARED DETECTION. Publication number: ...

The solar wireless smoke detector provided by the invention is large in wireless covering region and is safe and reliable; remote users can conveniently obtain alarming information in time by using the solar wireless smoke detector and process the alarming information; the solar wireless smoke detector is simple in system, easy to realize, and energy-saving and environment ...

Gautam Solar, manufacturer of Technically Advanced Modules™, files a patent for its latest artificial intelligence (AI)-based system to detect defects in solar panels. This innovative solution integrates advanced imaging and AI technologies to enhance the efficiency and precision of defect detection in photovoltaic cells, setting a new benchmark in the solar ...

Gautam Solar, manufacturer of Technically Advanced Modules™, has announced the filing of a Patent for its latest Artificial Intelligence (AI)-based system to detect defects in solar panels. The company claims that this innovative solution integrates advanced imaging and AI technologies to enhance the efficiency and precision of defect detection in photovoltaic cells, setting a new ...

A solar powered smoke detecting alarm system 1, which can be fitted to a window, comprises a photo-electric cell 2 which converts light energy into electrical energy, in the form of a trickle charge, which is stored in the rechargeable battery 5. The battery powers a smoke detector 10 which when activated through exposure to smoke particles transmits a ...

It Connects to solar panels used in solar street lighting, and gets the required electricity from the same solar system. Solar panels are washed with dripping water in less than half a minute by ...

By detecting and addressing defects early in production, the technology extends the lifespan of solar panels and ensures they meet stringent performance standards. Its robust quality control capabilities ensure products meet standards, accelerating the adoption of renewable energy, says Gautam Mohanka, CEO, Gautam Solar in conversation with Sanskriti ...
