

What types of batteries can I mail or ship internationally?

There are many types of batteries that have different requirements when you wish to mail or ship them internationally: Wet batteries, also known as flooded lead-acid batteries, are commonly found in vehicles and backup power systems.

How to ship batteries?

We've listed some must-dos on how to ship batteries: Batteries need to be packed in inner packaging that completely surrounds them, like a fiberboard box. This prevents short circuits. Inner packaging must be packed in strong, rigid outer packaging like wood, fiberboard, or metal boxes. This provides impact and crush protection.

Where can batteries be shipped?

Batteries can be shipped on all main modes of transportation used in logistics: air, ocean, road, and rail. However, there are some different regulations and requirements depending on the mode of transport. Below we cover general guidelines applicable to all transport modes, but check the following dangerous goods regulations for specific info:

Are batteries allowed to be shipped?

However, they still require proper packaging and handling to avoid damage and potential short circuits. With regards to what batteries are not allowed to be shipped, damaged or defective batteries should never be shipped due to the increased risk of safety hazards.

What documents are required for shipping batteries internationally?

Several documents are required for shipping batteries internationally. These include: Dangerous Goods Declaration (DGD): This document details the shipment, including the UN number, shipping name, hazard class, packaging group, and quantity. Required for all battery types.

Are lithium batteries safe to ship?

Improperly packaged lithium batteries can ignite, causing fires that are difficult to extinguish and pose a significant risk to the safety of transportation workers and the general public. Other battery types, such as alkaline or nickel-metal hydride (NiMH), are generally considered safer to ship.
