## **SOLAR** PRO. Solar cells for power generation at night

#### Can a solar cell generate electricity at night?

Farmland is seen with standard solar panels from Cypress Creek Renewables,Oct. 28,2021,in Thurmont,Md. A team of engineers at Stanford University have developed a solar cell that can generate some electricity at night. The research comes at a moment when the number of solar jobs and residential installations are rising.

#### Could a new solar cell improve nighttime power generation?

The Stanford team plans to engineer new solar cells to improve the nighttime power generationand also plan to scale up their prototype. Cost could be one barrier to scaling up the idea, since TEGs are typically made of expensive materials.

#### Do solar panels work at night?

Conventional solar panels only work in daylight, so you need expensive battery storage to enable solar-produced power to be used at night. Now a team at Stanford University in the US has tested solar panels that keep generating electricity round the clock. Their innovation takes advantage of the fact that solar panels cool at night.

#### How do solar panels cool at night?

Their innovation takes advantage of the fact that solar panels cool at night. Power can be generated from the temperature difference between the cooling panels and the still-warm surrounding air. This is done using a thermoelectric generator, which produces power as heat passes through it.

### How do nocturnal solar panels work?

These nocturnal solar panels, which are still in the experimental stages, would work based on a physical principle known as thermal radiation. During the day, conventional solar panels absorb sunlight and convert it into electricity.
