Should I get a 2000 watt solar system?

But if you had a 8 x 300W, 7 x 320W or 7 x 350W solar array, you can still get to the required watts and more. Another reason to get a 2000W+ solar system is the inverter efficiency. Inverters are not 100% effective in converting DC to AC so power is lost. The system will use more watts /amps than what the load requires, so more power helps.

How many watts can a 2000 watt inverter supply?

A 2000 watt inverter may have a surge capacity of 4000 watts. But if the solar panels can only supply 2000 watts, you cannot use this feature. Keep the wirings for the solar panels, batteries and inverter as near each other as possible. The thicker the wires the better.
