

What is solar street lighting?

Solar street lighting is an excellent solution for temporary or essential works lighting. Solar lights, using redeployable solutions such as the below concrete blocks, can be installed quickly without the need for a mains connection, providing immediate illumination. This flexibility is beneficial for essential work or emergency repairs.

What components are used in a solar street light system?

In most typical solar street light systems, the following components are used: the solar panel assembly, which is made up of the solar panel, mounting bracket, and hardware.

Do you offer solar light accessories?

We understand that not all applications and installations are the same and our customers often have specific needs when it comes to installing a lighting system. On that basis we offer an ever increasing range of optional solar light accessories, hardware and parts to help facilitate many of the lighting products and systems that we offer.

Which solar street lights are the best?

When it comes to solar street lights, LED fixtures are the most popular pairing for the solar power assembly; however, other lamp options are still available. The light fixture should provide the needed light levels on the ground for easy visibility while providing the most efficient lighting possible.

How do I choose the right solar street lighting?

Choosing the right solar street lighting can dramatically reduce installation costs but requires careful consideration. Here's what to look for: Solar Panel: Check panel power (Watts), size (M<sup>2</sup>), and efficiency (%). Higher values generally mean better performance. Solar Irradiance: Know the solar power available in your location.
