

Are lithium-ion batteries accelerating electric car price parity?

A worker installs a stack of lithium-ion batteries onto a battery pack for an electric vehicle in Kurashiki, Japan. The average price of lithium-ion battery packs has fallen the most in seven years, according to a BloombergNEF survey, in a development likely to accelerate price parity between electric vehicles and gasoline-powered cars.

How much will a battery cost in 2026?

According to the survey, average battery prices are expected to slip below \$100 per kWh as soon as 2026. This is widely considered the "price parity" threshold with ICE vehicles. By 2030, prices could fall as low as \$69 per kWh. The study also points out that geopolitical uncertainties and slower demand could impact pricing.

How much will battery electric cars cost in 2026?

Our researchers forecast that average battery prices could fall towards \$80/kWh by 2026, amounting to a drop of almost 50% from 2023, a level at which battery electric vehicles would achieve ownership cost parity with gasoline-fueled cars in the US on an unsubsidized basis. Source: Company data, Wood Mackenzie, SNE Research, Goldman Sachs Research

Could a battery price war make electric cars cheaper?

A battery price war is kicking off that could soon make electric cars cheaper. Here's how The main cost of an electric vehicle (EV) is its battery. The high cost of energy-dense batteries has meant EVs have long been more expensive than their fossil fuel equivalents. But this could change faster than we thought.

Are EV battery price cuts a sign of progress?

But the promised price cuts are also a sign of progress. Researchers have made great strides in finding new battery chemistries. CATL and BYD now make EV batteries without any cobalt, an expensive, scarce metal linked to child labor and dangerous mining practices in the Democratic Republic of the Congo.

Will a drop in green metal prices push electric vehicle battery prices lower?

Technology advances that have allowed electric vehicle battery makers to increase energy density, combined with a drop in green metal prices, will push battery prices lower than previously expected, according to Goldman Sachs Research.
