Thermal energy storage technology of liquidsolid phase change materials (LSPCMs) is one of the most attractive thermal energy storage technologies due to its high energy storage density, low ...

Solid-liquid PCMs are currently commonly used in applications, but their leakage and corrosiveness will affect the application of phase change materials in solar energy storage. Therefore, solid-solid PCMs have been widely used in practice [115]. Solid-solid PCM is an ideal material in this regard due to its anti-leakage, non-toxicity, and non ...

systems at home and abroad mainly focuses on using battery or phase change material (PCM) for energy storage. The investment and maintenance costs of development of off-grid photovoltaic refrigeration system with battery is still restricted [2]. PCM absorbs -liquid phase change to achieve thermal energy storage.

The latent heat TES (LHTES) utilizing phase change material (PCM) is one of the most effective methods for the storage of energy in confined space. The LHTES encounters the issue of the non-uniform driving temperature difference between PCM and heat transfer fluid that causes a slow rate of heat transfer, and asynchronous phase transition.
