

Three lithium batteries power the hard drive

What is a Max HDD battery?

Call for quantity discounts! The Max HDD is an aftermarket 70 hour lithium single cell CC battery comparable to the Silver Supercell. It has been independently tested & proven to outlast ALL other aftermarket batteries on the market. This battery is designed specifically for HDD application with Heat Shield technology.

Can a second battery occupy a space on a HDD?

Or if you do get a configuration with an HDD, you can take it and the battery out, put in a larger battery, and optionally upgrade the SSD. Although this is functionally very similar, this is still quite a different solution to what the OP describes. He specifically mentions having a second battery that could occupy that space.

Can a phone battery fit a 2.5 inch HDD?

Consider that I can fit a phone battery (~15 Wh) in the standard dimensions of a 2.5" HDD, with room to spare. It's common for laptops these days to come with a ~45 Wh (or even 30 Wh, though those tend to be smaller laptops without the 2.5" bay) battery. That's 30% extra capacity. Anywhere from an extra 1 to 3 hours depending on usage.

What should you not do with a lithium battery?

Do not purposefully drain your battery very low (10% and less), and do not keep them charged often or always high (100%). 3. Lithium batteries do not like the following: A: Deep discharges, as meaning roughly 10% or less. Avoid this in all instances if you can. This is hard on your battery.

What happens if you use a lithium ion battery?

The main quantified damage done in the use of Lithium Ion batteries are instances where the internal notebook battery is "often drained very low", this is bad general use of your notebook battery. All batteries in any device are a consumable meant to be replaced eventually after much time, even under perfect use conditions.

Can a laptop battery replace an optical drive with a HDD?

No such generic device (because of the damage that could ensue if connections were incorrect) For IBM/Lenovo laptops there exist (ed) Ultrabay batteries to replace an optical drive with a battery (and adapters to replace an optical drive with a HDD), but I don't know any battery that would replace just a HDD.

The battery can act as a power regulator, and thus help protect the hard drive, particularly if the power is unstable. In reality though, a hard drive should not be affected by the absence of a battery, and hard drives are expected to fail at some point as they have moving parts.

To refresh the cells you actually have to recharge each cell and not just attach the battery to the SSD and call it a day. And SSD does keep the data for a long time.

Rechargeable lithium batteries life varies, where some devices have problems is if they have a bit of a phantom drain, such as utilizing soft touch buttons or otherwise maintaining some active power consumption when turned off.

Extremely lightweight, 50% to 70% lighter than standard batteries; Heavy duty case and terminals; Increased cranking amps over lead acid batteries; Fast recharge, can be brought up to 90% charge in within 6 minutes; Easily 6 to 12 times more cycle life compared to lead acid batteries; Long shelf life, up to 1 year before requiring recharging
