In this paper, a tower solar collector-aided coal-fired power generation (TSCACPG) system is proposed and studied in order to save the fossil energy and protect the environment.

Zhu et al. firstly analyzed the economy of three CSP technologies (parabolic trough, solar tower, and solar dish) in China in 2015, and the results showed that at the current stage, the LCOE value of the three technology types was between 1.2 and 2.7 RMB/kWh, and solar tower was the most economical one. However, this study still has some limitations.

In this paper, a tower solar collector-aided coal-fired power generation (TSCACPG) system is proposed and studied in order to save the fossil energy and protect the environment. The integration scheme of tower solar collector and conventional coal-fired power plant is proposed.
