

Can solar panels be installed on a south-facing roof?

To maximise the amount of solar energy produced, solar panels are best installed on a south-facing roof, ideally at a 35° angle. Solar panels can be installed on a west-facing or east-facing roof too, but these won't generate as much power. A north-facing roof will receive the least direct sunlight, so is not recommended.

Can solar panels be shaded?

Any amount of shade on solar panels reduces their solar efficiency and energy output, so it's essential to install your panels where they won't be shaded by trees, structures or other buildings. Experts often recommend using a solar panel optimiser to monitor and help improve the performance of your solar panel system.

Are Screwfix solar panels a good choice?

The solar panels are the cornerstone of any solar energy system, and Screwfix's solar panels are designed to deliver not just energy, but efficiency, reliability and a great aesthetic too. We stock sleek, high output and weather resistant solar panels, with an adjustable mounting bracket and USB-C connection.

Are solar panels a good investment?

Solar panels are becoming an increasingly popular way to make your home more energy efficient. They offer the opportunity to harness renewable, low-carbon electricity from natural sunlight, which could help reduce your reliance on the national grid and lead to lower energy bills.

What is a Screwfix solar panel system?

With Screwfix's range of solar energy systems, you have access to high-efficiency solar panels and innovative inverters, ensuring optimal energy conversion. This section will cover how these technologies work together to power your home, reduce reliance on the grid and create potential long-term cost savings. Is a solar panel system right for me?

What is a solar panel inverter?

Inverters are pivotal in transforming solar power into usable home energy, and your solar energy system cannot work without it. Screwfix provides two primary types of solar panel inverters: These devices convert DC from your solar panels into AC, integrating seamlessly with the home's electrical grid.
