

Can a second battery occupy a space on a HDD?

Or if you do get a configuration with an HDD, you can take it and the battery out, put in a larger battery, and optionally upgrade the SSD. Although this is functionally very similar, this is still quite a different solution to what the OP describes. He specifically mentions having a second battery that could occupy that space.

Can a laptop battery replace an optical drive with a HDD?

No such generic device (because of the damage that could ensue if connections were incorrect) For IBM/Lenovo laptops there exist (ed) Ultrabay batteries to replace an optical drive with a battery (and adapters to replace an optical drive with a HDD), but I don't know any battery that would replace just a HDD.

How do I connect extra batteries to my laptop?

There's no standard connector for extra batteries - they need to interact with the charging system which not standardized across laptops. Devices like a 2.5" SATA HDD /SSD plug into a power connector that supplies them with regulated 12V, 5V, and 3.3V power. That's the same power bus that powers other devices.

How many Watts should a HDD battery pack be?

5 +/- 0.25V (Not sure on I, but should be a max of what a USB port can provide, or slightly higher). For battery source a 4 Cell NiCd battery pack will be fine. Just parallel battery packs for Amp hours need, Bare in mind the 10/20 watts for the HDD is max and at idle is only a couple of watts which means battery will last much longer.

Can you connect a battery to a laptop's internal power supply?

You can't usefully connect a battery to the regulated output side of the laptop's internal power supply. The laptop will maintain the 12V rail at about 12V regardless of whether it's plugged into the wall or not. A hypothetical battery wouldn't know whether to charge itself or try to supply current on the 12V rail.

How much power does a laptop hard drive use?

5% is ok anything over 13volts/ under 11.5 is somewhat out of bounds. I would suggest a laptop drive as they require much less power. what kind of dvr would you be using .. a usb powered laptop drive drive in an external enclosure comes to mind. they use between 1 and 3 watts of power. Thanks rand. I hadn't thought about a laptop hard drive.

You'll need a DC-DC converter/regulator that will take your battery power and provide the right (stable) voltage to the DVR. (Trying to do that directly from the batteries is a ...

Is battery life the most important thing? -- Then get the 6 cell battery. You can always plug in a USB hard drive and get extra storage space that way. Is tons of storage space without having to carry an external HDD ...

The OEMTOOLS 25316 Battery Carrier offers a safe and easy way to grab, lift, and carry top post or side post batteries. This auto battery lifter is perfect for use on battery-powered machines, making this a great golf cart battery lifter and an ideal car battery lifting tool for campers, ATVs, and lawnmowers.

SSDs use less power, more RAM uses slightly more power. I wouldn't expect either of these to make a huge difference in battery life though unless your HDD was ...

A hard drive without a computer attached is a box. Doesn't matter how much power you add to it if you don't have something that can actually access it and retrieve data. If it's a USB drive ...

SSDs (Solid State Drives) consume less power than HDDs (Hard Disk Drives) because they have no moving parts.. HDDs use spinning disks and a moving read/write head, which consumes more energy. As a result, laptops with SSDs ...
