

Valve-regulated lead-acid battery fire extinguishing

Do lead/acid batteries burn?

Lead/acid batteries do not burn, or burn with difficulty. Do not use water on fires where molten metal is present. Extinguish fire with agent suitable for surrounding combustible materials. Cool exterior of battery if exposed to fire to prevent rupture. The acid mist and vapors generated by heat or fire are corrosive.

Do you need an MSDS for a lead-acid battery?

However, there is a requirement to provide safety information on products. This document, which fulfills this requirement, is commonly called an MSDS, but, in Europe, is more correctly referred to as 'Instructions for the Safe Handling of Lead-Acid Batteries'.

What should I do if a battery is contaminated with sulfuric acid?

Do not allow metallic materials to simultaneously contact positive and negative terminals of the batteries. Charge the batteries in areas with adequate ventilation. None required under normal conditions. When concentrations of sulfuric acid mist are known to exceed the PEL, use NIOSH or MSHA-approved respiratory protection.

Are lead-acid batteries recyclable?

Lead-acid batteries are completely recyclable. Return whole scrap batteries to distributor, manufacturer or lead smelter for recycling. Contact local and/or state environmental officials regarding disposal information. Product can be recycled along with automotive (SLI) lead-acid batteries. SECTION XIV. OTHER INFORMATION
