Can hydrogen be stored in lakes?

The methodology proposed for hydrogen storage in lakes, hydropower, and pumped storage reservoirs is described in Fig. 4a-c. This is possible because hydrogen is insoluble in water and not toxic 25,39. Hydrogen has even been shown to be beneficial for aquatic environments 40.

Do hydrogen storage systems use water?

Evaluating the water usage of hydrogen storage technologies is crucial, especially in regions where water scarcity is a concern. Proper waste management practices for components of hydrogen storage systems at the end of their life cycle are essential. Recycling and responsible disposal methods help minimize environmental impacts.

What are the environmental benefits of hydrogen storage technologies?

The environmental benefits of hydrogen storage technologies heavily depend on the method of hydrogen production. Green hydrogen, produced using renewable energy sources like wind or solar power through electrolysis, is considered environmentally friendly as it avoids carbon emissions associated with traditional production methods.

How does hydrogen storage support the development of a hydrogen economy?

Hydrogen storage in lakes and reservoirs can support the development of a hydrogen economy in the future by providing abundant and cheap hydrogen storage. The green hydrogen economy has the potential to replace fossil fuels as the primary source of energy for transportation, industrial processes, and electricity generation 1.

What type of hydrogen storage system should be used?

A safe, cost-efficient, compact and light hydrogen storage medium is essential for the hydrogen economy. Highly pressured gaseous hydrogen and liquid hydrogen storage systems are the conventional hydrogen storage systems.

How to transport hydrogen from production areas to storage facilities?

Transportation: Transporting hydrogen from hydrogen production areas to storage facilities can be challenging due to its low volumetric energy density. It is crucial to develop practical and affordable transportation systems, like pipes or high-pressure tanks. 8.
