Can a power battery improve the safety performance and maintenance cost?

In the comparison of the safety performance and maintenance cost of the power battery after using three models, this model could improve the safety performance of the battery by 90.1% and reduce the maintenance cost of the battery to the original 20.3%.

What is a power battery & why is it important?

In contemporary society, many industries are promoting energy transformation, and the automotive industry's emphasis on new energy is constantly increasing. The power battery is one of the important components of New Energy Vehicles (NEVs), which is related to the safe driving of the vehicle (He and Wang 2023).

Do you need a measuring tool for EV maintenance?

As voltage levels in EVs continue to rise, caution is increasingly necessary across various maintenance and inspection tasks. Our recommended measuring tools for EV maintenance can be used to safely perform the necessary electrical tests for conducting high-voltage shutdown and reinitialization procedures in an EV.

Can a fault diagnosis model improve the safety of new energy battery vehicles?

Traditional FDM falls far short of the expected results and cannot meet the requirements. Therefore, the fault diagnosis model based on WOA-LSTM algorithm proposed in the study can improve the safety of the power battery of new energy battery vehicles and reduce the probability of safety accidents during the driving process of new energy vehicles.

Which power batteries have the highest safety performance?

This indicates that WOA-LSTM has the highest improvement in the safety performance of power batteries and the greatest reduction in maintenance costs. Table 2 compares the safety indicators and probability of battery safety accidents of power batteries using three different models.

Can WOA-LSTM improve battery safety?

In the experiment of safety management of power batteries, WOA-LSTM could improve the safety performance and reduce the maintenance cost of batteries. Overall, WOA-LSTM could improve the accuracy of power battery fault diagnosis, thereby enhancing battery safety.
