

Can solar panels be installed on a flat roof?

You can have solar panels on a flat roof, but they need a specialist mounting system to raise them to a suitable angle and provide ballast. Designing the system also requires a compromise between packing the available space and leaving room for shading between rows of modules.

Which type of roof is best for solar panels?

The best type of roof for solar panels is a south facing roof as they tend to generate the most electricity from solar panels. South facing roof panels see the sun when it is at its most intense for the longest period of time, which is why they generate the most energy.

Can a roof be used for solar panels?

You can also have a good-performing solar panel system if you have an east and west-facing roof, as you will have exposure in both the morning, afternoons and evenings. Your roof may be unsuitable for solar panels if it faces north, as this will have a direct impact on your generation. How can I calculate the orientation of my roof?

Can you install solar panels on a roof in the UK?

The majority of UK homes have a roof suitable for solar panel installation. Great news for anyone looking to generate their own renewable electricity. If you'd like to speak to an MCS certified (or equivalent) solar installer for advice - you can get free no-obligation quotes from up to 4 solar installers in your area using Solar Guide.

What is the best roof pitch for solar panels?

What's the best roof pitch for solar panels? The best roof pitch for solar panels is between 30-40°, but the angle of the roof can fall outside of this range and generate electricity effectively. Solar panels can still absorb sunlight even when horizontal.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

You can have the right roof size for solar panels, yet still have structural elements that are in the way, making your roof's layout difficult to work with. Our solar design team is used to creating clever work-arounds, but ...

So why not have backyard solar panels instead of roof-mounted ones? Any panels that go on your roof are limited by the roof's design. For instance, your roof may ...
