

What are the different types of car batteries?

Now, let's go over the 8 most common types of car batteries available today: 1. Flooded Lead Acid Battery (Wet Cell) The flooded lead acid battery is the oldest car battery type, and it's very common and affordable. It's also called the SLI battery, which stands for "Starting, Lighting, Ignition." The flooded battery is a wet cell battery.

Are car batteries one size fits all?

Car batteries aren't one size fits all. So before you purchase a battery, you'll need to make sure it will actually fit into the space for it. There are battery size groupings to make this more simple. For example, if you know your existing battery is the 027 type, then you'll know you need another 027 battery.

What type of battery does a car use?

Most cars with an internal combustion engine use a lead acid battery. Flooded battery: Also known as the wet cell battery, and requires regular topping up with distilled water. Valve Regulated Lead Acid (VRLA) battery: The VRLA battery is a low-maintenance, sealed battery, which is why it's also referred to as the Sealed Lead Acid (SLA) battery.

Which battery is best for a car?

For vehicles with start-stop systems or those with high electrical demands (e.g., modern electronics, infotainment systems), AGM or lithium-ion batteries may be the best choice for durability and performance. For vehicles that have an AGM or Li-ion battery installed from the factory, the same type must be used when it's being replaced.

How long do car batteries last?

A car battery can recharge when the car is running by converting the mechanical energy from the engine, back into the battery. Batteries can last many years and thousands of miles, but knowing how to replace them is something that a qualified mechanic should do.

How do I choose the best battery for my vehicle?

Selecting the best battery for your vehicle involves considering various factors, including the type of vehicle you drive, your driving habits, and the climate you live in. Performance cars, SUVs, and trucks often require batteries with higher power output, such as AGM or lithium-ion batteries.
