

How do I choose a battery pack for my laptop?

A compatible battery pack should be able to plug into the power port on your laptop. If you have a laptop with USB-C ports, you might want to get a battery pack with a USB-C connector. High-capacity connectors (like USB-C and Thunderbolt) can transfer a larger amount of power quickly, which means they can charge your laptop faster.

Do you need an external battery pack?

If you're in that line of work, you might really benefit from having an external battery pack. An external battery pack is an invaluable tool to have in your arsenal because your laptop will probably run out of juice if you're using it all day or if you're using power-draining applications. 4. Charge all your devices at once

What is the difference between a battery pack and a power bank?

Both of these devices do the same thing in basically the same way, although they go by different names - they act as an external power supply for your laptop when you can't plug into an outlet. Battery packs/power banks are pre-charged, so you don't have to plug them into an outlet while you're using them to recharge your laptop.

How do you store a battery pack?

Once it reaches 100%, unplug it. Keep battery packs away from extreme temperatures. Ideal storage temperatures are between 32°F and 77°F. Direct sunlight can heat them up quickly, so storing them in a shaded area is recommended. If you're not going to use the battery pack for a while, store it at around 50% charge.
