

Why is solar energy not widely used in residential areas?

One of the main reasons why solar energy is not yet widely used in residential areas is the cost of solar panel installation. While the cost of solar panels has decreased over the years, the cost of installation is still relatively high. Additionally, not all homes have suitable roofs or enough space to install solar panels.

Is solar energy worth the cost?

Typically, yes, solar energy is worth the cost. But whether or not it's right for you depends on many variables you'll need to investigate for yourself, including your location, tax rebates and incentives and net metering availability among others.

Why are cheap solar panels so expensive?

The overall construction of cheap solar panels is poor. This includes the use of low-grade ethylene vinyl acetate (EVA) which degrades over time and results in lower energy production. Also, the back of the cheapest solar panels is often made from Tedlar (polyvinyl fluoride film trademark), which is prone to degradation and deterioration.

Are low-cost solar panels a good investment?

Low-cost solar panels are an affordable option for homeowners, yet their lower efficiency results in lower overall energy production which may lead to a slower payback period on your investment. Opt for cheap solar panels if you have a tight budget and your household energy consumption is relatively low.

Is a solar energy system worth the investment?

If you have plans to move soon, a solar energy system might not be worth the investment. The upfront cost of solar panels can take several years to recoup, and if you leave before hitting that break-even point, you might miss out on the full benefits.

Is it worth installing solar panels?

If you answered 'yes' to most of these questions, solar energy is likely a great investment for you. If you're uncertain, speaking to a solar expert can provide tailored advice based on your specific situation and renewable energy goals. Why are solar panels not worth it for all homeowners?

You'll likely need two batteries during the life of your solar panels. Batteries last around 15 years, while solar panels last about 25 years. Consider if you'll recoup the costs over the life of your solar panels. As an example, if a \$5,000 battery lasts 15 years, you need to be saving about \$330 a year to break even.
