What's new in the UK energy storage sector?

Energy Voice takes a look at major developments in the UK energy storage sector in our new series, Charging Forward. This week's Charging Forward features pumped storage hydropower, BESS, and gravity-based energy storage.

How much does a new battery energy storage system cost?

The cost of building a new battery energy storage system has fallen by 30% in the last two years. In 2022, a new two-hour system would have cost upwards of £800k/MW to build. In 2024, that figure is £600k/MW. Cost reductions are expected to continue into 2025 and beyond. 2. Lower Capex is offsetting lower revenues

What is long duration electricity storage (LDEs)?

Long Duration Electricity Storage (LDES) technologies contribute to decarbonising and making our energy system more resilient by storing electricity and releasing it when needed. LDES can also help reduce costs for consumers through reducing their bills and by avoiding the need for expensive electricity grid upgrades.

What is the 'cap and floor' regime for long duration electricity storage (LDEs)?

Ofgem is the regulator for Long Duration Electricity Storage and oversees implementation of a 'cap and floor' regime for LDES projects, proposed by the Department for Energy Security and Net Zero (DESNZ). The aim of this regime is to stimulate investment in Long Duration Electricity Storage projects.

How can LDEs help reduce energy costs?

LDES can also help reduce costs for consumers through reducing their bills and by avoiding the need for expensive electricity grid upgrades. Ofgem is the regulator for Long Duration Electricity Storage and oversees implementation of a 'cap and floor' regime for LDES projects, proposed by the Department for Energy Security and Net Zero (DESNZ).

What's happening with battery energy storage in Great Britain?

Solar & Storage Live 2024 took place between September 24th and 26th at the NEC in Birmingham. On day two, Modo's GB Markets Lead Wendel discussed the current key trends for battery energy storage in Great Britain. This article summarizes that presentation. 1. Battery energy storage capex is falling, a lot

The energy storage rate q_{sto} per unit pile length is calculated using the equation below: $(3) q_{sto} = m \cdot c_w \cdot T_{in} - T_{out} \cdot L$ where m is the mass flowrate of the circulating water; c_w is the specific heat capacity of water; L is the length of energy pile; T_{in} and T_{out} are the inlet and outlet temperature of the circulating water flowing through the ...
